SUBJECT INDEX

Acidity of zeolites. *See* Zeolites
Aluminium in zeolites. *See* Zeolites

Batteries, electrochemical insertion 220–223
Bronstead acidity of zeolites. *See* Zeolites
Bulk nucleation and growth 169

Carbon monoxide, activation in zeolites 115–118
Catalysis 231
Chemical mechanisms, optoelectronic control of 273–274
Chemical sensors 230
Chromium in zeolites. *See* Zeolites
Cobalt in zeolites. *See* Zeolites
Contracting-envelope progression 166–167
Copper in zeolites. *See* Zeolites

Data processing systems 269–274
Diffusion coefficients 218

Electrochromic devices and mechanisms 229–230
Electrode materials, organic 223–226
Energy conversion and storage 195–290
Energy converting interface 234–236
Evaporative thermoelectric energy converters 265–267

Halobacterium halobium 251
Heat transformation and storage 260–264
High energy magnets 158–160
Host materials
  electrical properties 201
  electronic properties 202–204
  structural properties of 198–201
Hydride–metal interface, controlled reactions 166–170
Hydriding reactions 163–194

Information processing and storage 269–274
Insertion materials 195–290
Insertion reactions
  applications 229–231
  electrochemical 219–229
  physical chemistry of 196–216
  thermodynamics of 204–214
Intrinsic kinetic parameters (IKP)
  definition 165–166
  evaluation of 165–173
  pressure–temperature dependence 174–182
Ion pumps
  artificial light-driven 252–260
  with photosensitive membranes 251–260
Ion transfer reactions, light-induced 236–239
Ionic conductivity 216–219
Iron in zeolites. *See* Zeolites

Laves phase systems 130
Lewis acidity. *See* Zeolites
Light-driven proton-pump 251
Light-induced ion transfer reactions 236–239

Magnets, high-energy requirements 129
Manganese in zeolites. *See* Zeolites

Nickel in zeolites. *See* Zeolites
Nitric oxide, activation in zeolites 112–115

Optical information processing and storage 269–274
Optoelectronic control of chemical mechanisms 273–274
Oxygen activation in zeolites 110–112

Pauli paramagnets 132
Permanent magnet materials. *See* Rare earth–transition metal systems
Photodiffusion effects 280–282
Photoelectrochromic information storage 270–272
Photoinduced ionic mechanisms, microwave studies 272–273
Photoinsertion cells 244–249
Photoinsertion reactions 231–251
  theoretical model for 274–280
Photon energy conversion and storage 239–244
  efficiency consideration 249–251
Photon powered evaporative generators 267–269
Photosensitive membranes 251–260
  materials for 255–260
Preferred edge-attack 167
Proton-pump, light-driven 251

Rare earth cations 79
Rare earth intermetallics, magnetic features of 129–231
Rare earth/non-magnetic systems 131–132
Rare earth–transition metal magnets, application of 159–160
Rare earth–transition metal systems 127–162
  $CaCu_5$ structure 134–137
  Nd–Fe–B 145–146
  $Nd_2Fe_{14}B$ 155–157
  $PrCo_5$ 137
  $Pr_2Fe_{14}B$ 155–157
  RAl_2 132
  RCo_5 135, 136
  R_2Co_{17}
    alloy systems 143–145
    Curie temperatures 141–143
    magnetic anisotropies 143
    magnetization 141–143
  $R_2Fe_{14}B$ magnets 145–158
  R_2Fe_{17} 138–141
  RNi_5 135
  R_2Ni_{17} 138–141

$SmCo_5$ 137
$Y_2Fe_{14-x}T_xB$ 151

Solar energy conversion 214–216
Solid state ionic mechanisms 216–219

Thermal energy converters 260–269
Thermionic energy converters 264–265
Titanium in zeolites. *See* Zeolites
Topochemical mechanisms, interfacial electrochemistry 226–229
Topotactic reactions 196–198
Transition metal composites, synthesis 99–125
Transition metals and transition metal complexes. *See* Rare earth–transition metal systems; and Zeolites

Vanadium in zeolites. *See* Zeolites

Zeolites 1–125
acidity 86–98
activation of CO 115–118
activation of NO 112–115
activation of O_2 110–112
activation of small molecules 109–118
active surface 55–59, 93–97
Al content 27
Al-extraction 30
bond type 41–42
bond valances 49
bridging hydroxy 86–87
Brønsted acidity 86–91
carboniogenic properties 86
catalysis 59, 61
by transition metal ions and their complexes 118–120
cation-avoidance rule 28
cation coordination geometry 18
cation distribution 53–54
cation–framework interactions 47–55, 62
cation jump mechanism 66
cation migration 63–65
cation properties 52
cation site type 16
cation-siting factors 50–51
cationic mobility 62
cations 16–18
chemical composition 27–32
chemically modified 29
coordination networks 14, 15
coordination of rare earth cations to lattice oxygens 79
coordination of transition metal ions to lattice oxygens 69–79
chromium 78–79
cobalt 75
copper 70–74
iron 76–77
manganese 77–78
nickel 74–75
other transition metal ions 79
titanium 79
vanadium 79
coordination sequences 14, 15
crystal morphology 24
crystal symmetry 19–20
crystallinity 24
dealumination-stabilization 30–32
definition 5
electric field gradients 61–62
electron–donor electron–acceptor interactions 47–49
electronegativity equalization 42–43
framework composition 26, 51
framework density 14–15
framework geometry 44, 49
framework topology 5–16
framework collapse 34
fundamental stretching vibrations of OH groups 90
general properties 16
homogeneity 27
influence of Al content on 51
ion exchange 52
isomorphous substitution 43–44
isotypic species 13
lattice Al vs. extra-lattice Al 31
Lewis acid centers 93
Lewis acidity 91–93
local cation motions 67–69
local symmetry 20–21
mobility of exchangeable cations 62–69
OH bond strength 87–89
OH-nests 30
O–T–O bond angle vs. T–O bond length 45
partial charges 42–43
physical characterization 61–79, 90
point defects 33
protons 93–97
saturation 28
secondary building units 6–13
Si 3d-orbitals 46
Si–O bond properties 46
site occupancies 51–5
solid-state transformation 24–26
stability criteria 16
stacking faults 34
structural chemistry 41–85
framework 41–46
structural defects 33–35
structural variability 6
structure classification 15
structure fragments in synthesis solution 21–23
structures 5–40
symmetry 19–21
synthesis 21–27
T–O bond ionicity 46
T–O bonding properties 44
T–O–T bond angle vs. bond length 45–46
temperature effects 54
templation 23
terminal hydroxyls 89
transition metal complexes 99–125
transition metal composites
carbonyls 108–109
decomposition 105–109
gas phase ligand adsorption 101–102
ion exchange 99–101
physical characterization 103–104
pretreatment in O_2 107–108
pretreatment *in vacuo* or in inert atmosphere 105–107
